 This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 36. 				
2. This REPORT consists of a total of	6 sheets, including	g this cover s	heet.	
This report is also accompanied by ANNEXES, i.e., sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT).				
These annexes consist of a to	tal of sheets.			
3. This report contains indications relat	ing to the following items:			
I Basis of the report				
II Priority	II Priority			
III Non-establishment o	f opinion with regard to novelty,	, inventive ste	p and industrial applicability	
IV Lack of unity of invention				
Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability;

IV. Lack of unity of invention				
In response to the invitation to restrict or pay additional fees the applicant has:	· ·			
restricted the claims.				
paid additional fees.				
paid additional fees under protest.				
neither restricted nor paid additional fees.				
This Authority found that the requirement of unity of invention is not complied with and chose, according to Rule 68.1, not to invite the applicant to restrict or pay additional fees.				
3. This Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is				
complied with.				
not complied with for the following reasons:	•			
•				
. Consequently, the following parts of the international application were the subject of international preliminary examination in establishing this report:				
all parts.				
the parts relating to claims Nos.				
- F Chang to Change 1400.				

Supplemental Box

(To be used when the space in any of the preceding boxes is not sufficient)

Continuation of: IV.3

Unity of the invention

This Authority has determined that the international application contains multiple inventions or groups of inventions which are not so linked as to form a single general inventive concept (PCT Rule 13.1), namely:

1. Claims 1 to 11:

Hybrid propulsion having a mechanism with multiple powertransmission paths, with checking of the correspondence between the measured values of the rotational speeds of the three planetary gear set elements

2. Claims 12 to 14:

Hybrid propulsion having a mechanism with multiple powertransmission paths, with generator control and motor control in dependence upon the speed ratio of the continuously variable transmission

Independent claim 12 is only optionally dependent on claim 1 ("more particularly" is not limiting).

The subject matter common to these two inventions is therefore a hybrid propulsion having a mechanism with multiple power-transmission paths and an internal combustion engine speed sensor and output speed sensor. This is already known from EP1219485 A (D1).

Industrial applicability (IA)

Claim 1: novelty and inventive step

Claims

Claims

The first invention relates to a hybrid propulsion for motor vehicles having an internal combustion engine, an electric motor and a generator, and having a mechanism with multiple power-transmission paths which is disposed between the internal combustion engine, the generator and the electric motor and which has a gear input for the internal combustion engine, a gear input for the generator and a gear output for the electric motor, which motor is positively coupled to driven wheels of the motor vehicle via a drive train. All this is known from D1.

In D1, the speeds of the internal combustion engine, the generator and the electric motor are measured, or one of these is calculated via the planetary gear set equation.

In order to identify a defective speed sensor and to enable the vehicle to continue being driven even with a faulty sensor, it is proposed that the drive train speed used is a speed that can be verified from the above-mentioned measured values on at least two different paths that are mutually asymmetrically redundant.

It is not obvious to modify D1 so that the motor speed can be both measured and simultaneously calculated.

The present application therefore satisfies the requirements of PCT Article 33(1) to (3), because the subject matter of claim 1 is novel and involves an inventive step.

Claim 12: novelty and inventive step

D1 discloses the preamble of claim 12.

The generator or the internal combustion engine is controlled by means of its desired torque. In order that the mechanism with multiple power-transmission paths can be used as a continuously variable speed-transforming transmission, the second invention proposes that the generator and the electric motor be controlled by a control arrangement in dependence upon a setpoint/actual-value comparison of the ratio of the internal combustion engine speeds and the drive train speeds. That is not known in the prior art.

The present application therefore satisfies the requirements of PCT Article 33(1) to (3), because the subject matter of claim 12 is novel and involves an inventive step.

Claims 2 to 11 and 13, 14

Dependent claims 2 to 11 and 13, 14 concern developments of the subject matter of claims 1 and 12 respectively and therefore likewise satisfy the PCT requirements.
